

Microform Scanning and Creation

We have equipment available to scan all common micrographic media. We can perform high speed conversion of microfilm, microfiche and aperture card images to digital format or we can pick out specific images from film or fiche and process them. We accept all sizes of microform scanning projects from a few images from a microfiche card to thousands of reels of 16 MM film. Not only can we convert microform images to digital, we can also take digital content and create a permanent record of it on microfilm.
